O$_2$
business

More collaboration. More security. And much more than file sharing.

Box from O$_2$ is a collaboration tool that lets organisations share and work on content online. But that's where comparisons with other cloud-based file sharing services end. Box sets new standards for security and collaboration, which supports the move to more flexible working. And from O$_2$, you get a full end-to-end service and have the simplicity of dealing with just one supplier.

Box doesn't just meet the security, mobility, access and workflow needs of your organisation, it also matches the expectations of your people. It's used by 32 million people worldwide and with 37% of employees working from three or more locations, and 53% using three or more devices for work, it is increasingly seen as a key tool to deliver the benefits of flexible working. Box from O$_2$ is part of our true end-to-end service – from mobile to desktop, on-premise to the cloud.

With Box you can:

- Control who sees what
- Apply usage and editing rules to groups or individuals
- Track and audit document changes
- Ensure version control (even on social elements like comments)
- Use the Box app to securely link people, devices and files across locations, at any time

Security

Box is approved by the Cabinet Office to hold official data and offers levels of security not found in other cloud-based services. Users and permissions are managed through a simple admin portal and files can be password protected. It's a level of security that's mirrored across our solutions. In fact, O$_2$ is the first UK mobile network to receive CAS(T) certification – a security standard established and assessed by GCHQ.

Other security features include:

- Data encryption
- Device controls
- App security
- Identity authentication and authorisation
- Monitoring, reporting and compliance

All your data is stored in highly secure data centres and Box is compliant with all the leading security certifications: ISO27001, PCI DSS, Safe Harbour, and SSAE16 Type II, SOC 1 and 2.

Collaboration

You can access Box on your mobile or tablet, through a range of apps for iPhone, iPad, Android and BlackBerry. Remote or highly mobile teams can access, synchronise and share information quickly and securely. This boosts your productivity, ensures projects are completed faster and makes decision-making quicker. Box provides a single point of access and can integrate with other systems like NetSuite, Salesforce.com, SharePoint, DocuSign and Office 365. Box is optimised to support and drive mobile strategies and help you experience the benefits of flexible working. Access and usage rights for Box from O$_2$ can also be managed as part of our mobile device management solution, which allows you to set policies right down to the individual SIM level.

The benefits of Box from O$_2$

- The highest levels of security
- End-to-end managed service

We'll support you all the way

Box is priced per user, per month, with features depending upon your individual plan. We can also help you get up and running with a choice of three services. For more information on the Box solution that's right for you or to arrange a demo, call us on **01235 433 507** or visit **o2.co.uk/enterprise**

Why O$_2$?

We are a trusted adviser with years of unrivalled business mobile experience. Where others may offer a single product or solution, we have a substantial portfolio of Enterprise Mobility solutions which can be integrated and provided as a single end-to-end service. These include fast mobile, voice and data connectivity as a single network, managed security and access solutions, plus devices and applications for every sector. Our solutions work on-premise, as hybrid and on the cloud. It's our experience of delivering these services to 180,000 internal customers in 26 countries, and to our many external customers, that means we can guarantee the best possible service.
