

Mobilise your people the easy way with Pocket UC

Unique to O2.

Empower your workforce with flexible working and reap the benefits of Unified Communications without the large upfront cost.

Pocket UC is a bold new concept, only from O2. It provides business and public sector organisations with all the tools their teams need to work from anywhere. And it's all available for a highly competitive per-user, per-month price with little up front investment unlike other UC and fixed infrastructures.

Getting up and running is easy

Your smartphone comes bundled with a mobile voice and data plan and a Unified Communications (UC) app. Now users can access their fixed and mobile lines on one handy device.

They can make and receive calls from their mobile as though they were at their desk and access a wealth of great features such as presence, click-to-call and instant messaging.

You can get started quickly too

There are ready-to-go Pocket UC builds that are sized and scaled to work with user groups of all sizes. And the app can be easily set-up using a QR code or emailed link.

The UC app is customisable, so users can choose the preferences that best suit them and their roles, for example selecting which line will appear as their call number or when they are available on their mobile line.

It's a brilliant way to fast-track your organisation to a new era of productivity, where your people can work from anywhere, and moving towards a full UC transformation, if and when the time is right.

- Infrastructure-free
- Centrally managed
- Cloud powered
- Transparently priced

Simply smarter, the way O2 knows you like it.

Three reasons to say yes to Pocket UC

- **Free your workforce with flexible working:** Mobilise all your people or just key teams to work anywhere with clear, scalable pricing bands from 100 to 2,500 users.
- **Straight from the box features:** All the features you need are already built in so there's nothing else to think about.
- **Drastically cut costs:** Get rid of phone line duplication and put all your functionality on a mobile device without the cost of fixed UC infrastructure.

The perfect fit for you?

Pocket UC solves all sorts of mobility and flexible working challenges. It's ideal for public sector organisations that need to drive cost efficiencies or better manage case work, for example, letting team members receive calls while they're out and about while only giving some contacts the ability to reach them around the clock. It's also the smart way forward for private sector organisations focussed on building an always on, highly productive workforce without infrastructure spend.

Are you considering UC but cautious about the cost?

Pocket UC is a great transitional step, giving you many of the advantages of UC without any upfront infrastructure investment, and letting you roll it out team by team.

Is maintaining contact critical?

This solution is also a great way to create a more flexible working culture while ensuring people remain fully contactable on their fixed lines.

Do key project teams need mobilising quickly?

Cloud's famous ability to scale makes it easy to get started. A built-in directory for everyone in a group also smooths team collaboration.

Are you looking to reduce fixed estate costs?

Then it's time to shrink investment in legacy infrastructure and unnecessary telephony equipment, significantly slimming costs.

Good news for public sector customers

You can enjoy Pocket UC as a direct award through your Network Services agreement (RM1045)

Why O2?

We are the only IT communications provider offering a simple price per-user UC model attached to a clear monthly mobile tariff, all supported by our rich mobility portfolio and 30-year mobile heritage. Our mobile first technology strategy makes us an unrivalled partner for any flexible working project. Beyond that, our Pocket UC offer has real simplicity at its heart, bundling everything you need – a smartphone, a voice and data plan and a UC app – into one clear, affordable, cloud-powered package. Pocket UC is a great transitional step. If you feel your organisation is ready for a full UC transformation, we have a full UC portfolio as well as a track record of delivering these projects successfully. **Find out more here.**

O2 is the only provider to achieve sought-after CAS(T) certification over both our mobile and Wide Area Network (WAN) infrastructures too, making us the safe choice in every way.
