

# Blue Light Vehicle Services from O<sub>2</sub> Business

## In-vehicle connectivity for real-time visibility and actionable insights

Blue Light Vehicle Services (BVS) from O<sub>2</sub> Business provides UK police forces with in-vehicle connectivity and technology to improve their responsiveness and efficiency. They enable officers to get more done on the move – taking their personal police station with them – so they can better protect the public's safety.

### Key features

- **Plug-and-play vehicle telematics – already used by over 1 million vehicles**
- **Predictive maintenance to keep your fleet on the road**
- **Real-time data analytics to improve fleet efficiency and improve officer safety**
- **Simple fleet management via intuitive portal or integrated API**
- **In-car wifi that creates a mobile communications hub for officers and teams**
- **Secure, fast, simple data synchronisation**
- **Award-winning customer support**

### Transparency, insight, control

At the heart of our Blue Light Vehicle Services is a simple OBD-II plug-and-play device that transmits vehicle and driver information to a simple user interface for real-time monitoring. Over one million of these devices have been deployed worldwide, so you can choose this proven technology with confidence.

With an accurate and complete picture of your vehicles and drivers, you can manage your fleet more effectively. For example, you can use real-time data on vehicle condition to inform servicing and maintenance schedules – this will help keep your fleet on the road and prevent vehicle shortages. Predictive and preventative maintenance can also help reduce your repair costs by up to 14%.

Better fleet visibility and more accurate modelling will help you make more informed decisions too. This can lead to 10% improvements in vehicle and driver productivity and a 15% drop in CO<sub>2</sub> emissions.

## Keep your people safer

An unsafe vehicle is a hazard for both your people and the citizens they serve. It is also a huge financial liability for your force.

Our vehicle telematics give you a real-time view of:

- Vehicle mileage and location
- Diagnostic trouble codes
- Fuel and oil levels
- Tyre pressure and battery level
- Driver behaviour
- Seat belt engagement

With this information, you can ensure every vehicle is roadworthy and officers are driving safely. Across different sectors, this technology has resulted in 45% fewer accidents, a 50% reduction in accident pay-out costs and up to 25% savings on insurance premiums.

## Connected vehicles for productivity on the move

With a fast and reliable data connection on the move, officers can make better use of their smart devices, laptops, dash cams, fingerprint scanners and other devices. Information can be shared in real time from the frontline to the back office – and vice versa – for a more immediate response to incidents and a reduction in admin when officers get back to their desks.

O<sub>2</sub> In-Car wifi turns any vehicle and the surrounding area into a high-bandwidth wifi hotspot, so officers can access the resources they need, without having to drive back to the station. Especially useful in areas of low mobile data coverage, it lets them work in their car or nearby residence or building. And it can be used to create a localised incident hub for other officers, teams and devices to get connected too.

## Want to know more?

**Talk to your Account Manager to find out more about our Blue Light Vehicle Services.**

Want to see how else O<sub>2</sub> can support digital policing? See how [Surrey and Sussex Police](#) have increased the time officers spend on the frontline.

## The UK's only CAS(T)-certified mobile and WAN provider

All public sector organisations demand high levels of security from their network provider. We are proud to be the first UK network that meets all the security measures required for CAS(T) certification.

CAS(T) is a security standard defined by Her Majesty's Government. It means our network is regularly measured against strict criteria – and we are independently verified on an annual basis by an appointed Lloyds auditor (LRQA). At O<sub>2</sub>, we put network security at the top of our priorities and are always proactive in enhancing our security standards to give assurance to our customers and users.

## Why O<sub>2</sub>?

O<sub>2</sub> is the only UK telecoms company to have a team that's dedicated to policing. We have over 30 years' combined experience of helping UK forces modernise their processes and working practices.

For example, we helped officers at Surrey Police save between one and two hours of admin per shift, by enabling them to do essential work quickly on the move, rather than having to call back to the control room.

And we equipped 1,500 officers from Derbyshire Constabulary with new smartphones and applications to transform paper-based tasks into quicker and more efficient digital processes. They now capture information on the frontline and sync it automatically with back-office systems, reducing admin and paperwork.

## Solutions built around you

Whatever the digital and mobile maturity of your force, we'll use our experience of working with other forces to support you in just the right way for your people and citizens.

## Single point of support

When you work with O<sub>2</sub>, you get a single dedicated account team to support you. Whatever services you have from us, they'll be your single point of contact for any question, query or problem.
