

Enable your people.
Increase efficiency.
Promote growth.

We're helping organisations embrace disruption and gain value from the shift towards digital. We can demonstrate the value of a modernised comms infrastructure, opportunities to realise cost savings and enhance smarter – and secure – ways of working.

It's something we should talk about – how we can work together to create a platform that enhances your digital transformation.

O₂ Gateway – your foundation for digital transformation

Our innovative, converged network, O₂ Gateway, delivers all our customers' digital and connectivity needs as a service that is simple to use.

Time for a new way of working

Rising expectations and societal shifts towards flexible working, sustainability and convenience are forcing many organisations to rethink the way they operate. Combined with constant calls for greater productivity, efficiency and profitability, satisfying all stakeholders is becoming harder and harder.

Digitisation is changing everything. Whether it's what people want, how people communicate, or the speed with which your competitors launch new services. Digitisation is providing new opportunities to work smarter, enhance security and reduce the cost base for many businesses. The end result: the ability to continually respond to new demands as the landscape continually shifts.

With O₂ Gateway you can underpin your digital transformation and stay one step ahead.

“

O₂ is on a mission to be **“the best provider of integrated digital services in the UK”** based on three key pillars: creating a platform for a digital economy; providing service excellence, whilst being underpinned by brilliant digital experiences.

”

Introducing O₂ Gateway

As your technology partner, we can help transform how the right comms infrastructure empowers your business.

O₂ Gateway offers that single integrated connectivity platform, entirely owned and managed by O₂, giving you converged access to multiple services with one point of contact and one SLA.

What does this mean?

O₂ Gateway will seamlessly connect your sites and your people to all the services and business applications they need. Designed as one platform and built to be future-proof, so you can add new technologies and applications quickly, plus scale up and down at your own pace as your business demands. It offers the best platform for digital infrastructure – no other provider offers this with the same end-to-end capabilities or flexible pricing.

The combined effect on your business will be rapid improvements in your cost base, customer satisfaction and competitive advantage.

An optimistic outlook

Effective digital transformation addresses key challenges:

- Access to all applications and digital services from a single platform improves time to market for new services
- An integrated yet modular approach to digital technologies makes it easier to manage data security
- Consolidation of IT infrastructure lowers costs and improves agility
- Connected devices enable people across disparate locations to collaborate more effectively
- Data-driven insights meet growing demand for exceptional levels of service

Your one-stop-shop for connectivity

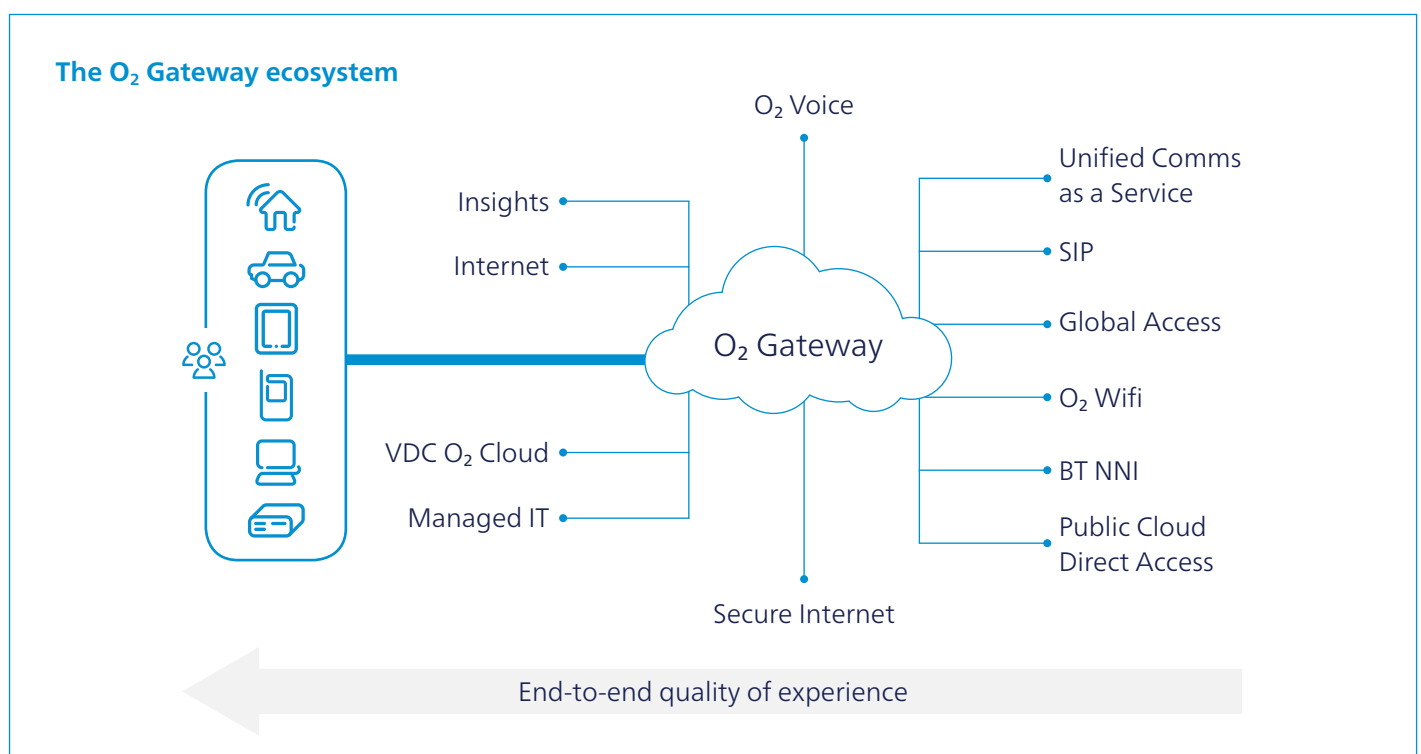

Whether it is internet access or as a site-to-site corporate WAN transit, O₂ Gateway provides the connectivity for all your digital needs. Because O₂ Gateway is wholly owned end-to-end by O₂, adding new digital services is simple and quick without having to wait for a legacy WAN provider to catch up.

Improving everyday efficiency

When your people can communicate and collaborate without disruption, you can be more productive. O₂ Gateway optimises your infrastructure so they can interact with ease. It works seamlessly with 3G and 4G, so there's no need for messy VPNs. It also allows you to offer single-number services, making it easier for those outside the organisation to contact you.

Supporting the digital ecosystem in a global market

O₂ Gateway offers connectivity to the largest digital ecosystem in the market, allowing customers direct cloud connectivity to Amazon Web Servers, Microsoft Azure, O365, Google and Oracle cloud services. It seamlessly enables SIP, UC as a Service, private cloud and O₂ Wifi access. And through our Telefonica global reach, O₂ Gateway WAN connectivity can be extended to over 125 countries around the world.

Giving you greater agility

Once connected to O₂ Gateway, you'll be able to roll out new or additional services quickly and scale bandwidth up or down. Changes like these are unlikely to disrupt the physical infrastructure, which means rapid deployment and faster adoption.

With integrated 4G and ready for 5G, O₂ Gateway also makes it easy to connect new sites to the corporate network faster than with traditional fixed infrastructure.

As well as a single, attractive commercial agreement, you can add services easily and reduce costs. If you have O₂ Wifi but want to add Skype for Business or MiCloud, we can just switch it on.

Offering a simple and secure experience

Because O₂ Gateway is a converged platform, we have better control over services and user experience. If any problems arise, we'll sort them out rather than leave you to juggle multiple providers. One partner and one set of SLAs helps you deal with issues before they impact your bottom line.

O₂ Gateway also makes access to the corporate network much smoother. Remote workers on any devices get the same secure, direct connections as those at headquarters. All mobile devices are given private access points that keep data separate and secure from the internet.

We are the only business to gain the government's National Cyber Security Centre security certification, CAS(T) for both WAN and mobile services. CAS(T) certifies an enhanced level of security over ISO27001 including additional controls where conformity to the controls is mandatory and independently audited annually to provide peace of mind.

Impact of O₂ Gateway

In the boardroom

- Faster route to smarter working and digital transformation
- Better use of resources and more cost-effective projects
- Enhanced access for remote teams to corporate data through 3G and 4G
- Proven savings of millions

For procurement

- Multiple services provided under a single SLA
- Easier way to allocate resources
- Simplified contract information for easier internal decision-making
- Reduced costs from flexible commercial options

On-site

- Easy access to full corporate network from any site
- Seamless collaboration for managing complex projects
- No hassle to add new sites onto the network
- Fewer errors and less time on the job

For IT

- Simpler network and user access management
- Faster provisioning of new services (days not months)
- Consistent user experiences across the network
- Peace of mind at network, connection and endpoint level
- Dedicated access from your corporate network to public cloud providers where other services, databases or systems are hosted

O₂ is on a mission to be **“the best provider of integrated digital services in the UK”** based on three key pillars: creating a platform for a digital economy; providing service excellence, whilst being underpinned by brilliant digital experiences.

Next steps

Let's meet to review your connectivity requirements and where you could see the biggest impact from O₂ Gateway. We can speak first to discuss the most appropriate attendees, agenda and timeline for a meeting.

And here's how you can benefit:

- O₂ Gateway is the UK's first truly converged, ubiquitous communications network recognised at the Computer Vendor Excellence Awards in 2016 with the 'Networking Infrastructure' award.
- It gives your business a proven blueprint for digital transformation, so you can:
 - » work smarter and make better decisions faster,
 - » deliver more cost-effective projects,
 - » maintain service standards,
 - » benefit from potential cost savings through simplification, and
 - » rest assured that security's inbuilt we're the only provider to achieve CAS(T) security certification for mobile and wide area network (WAN) infrastructures.
- It unifies multiple communication and collaboration tools so your people can work securely and without interruption.
- It offers all of this through one contract, one supplier and one network.
- **On an award winning network** – and we want to keep it that way. That's why we continue to invest significantly in our network, as uSwitch recognised when we won Best Network Coverage in the uSwitch Mobile Awards 2018. And Ofcom has confirmed that we've delivered on our licence obligation to provide 98% indoor coverage for 4G. Our commitment to invest significantly in our network will help us further strengthen the experience for our customers through improved coverage, more reliability and increased capacity.
