

Bluelight Managed Video

A Product Sheet from O₂

Mobile, wearable video recording to protect your officers and the public. Quick and easy to roll out, highly reliable and secure.

Supporting your front line officers

Police officers and other public-facing teams face an increasing number of threats to their safety. So it's essential that you can protect your front line officers, helping them to feel safer and better able to do their job.

With Bluelight Managed Video, you can quickly roll out mobile, wearable cameras for monitoring and recording activity while on duty. It's highly effective at proving that incidents have occurred

and stopping situations from escalating. The cameras act as a deterrent to further or more serious actions.

Video recording also helps to prevent miscarriages of justice: a trial by one police force showed that where video is used, a far greater proportion of arrests can be turned into convictions, and early guilty pleas are more likely.

Designed for the field

Cameras are integrated into a wearable video badge, similar to an ID card. You can choose from two settings:

- On/off recording, off by default, with officers starting recording by turning it on when it's required
- Pre-recording, off by default, but constantly recording (and overwriting) an adjustable cache, set by default to 10 minutes. Officers start recording when required but the final recording includes the cached content, helping to capture incidents that have spontaneously occurred

In both cases, recordings are encrypted and stored on the camera, then downloaded when the camera is connected to the video badge platform. This is usually at the end of the officer's shift.

We deliver a highly secure service, based on technology that was originally designed for the armed forces. The cameras are hard wearing and work well at night and in low light conditions. Recordings are stored encrypted on the camera, and all camera and platform activity is audited and recorded. It means you can be sure who has accessed what footage, protecting potential evidence from compromise, from point of capture through to prosecution.

But it's not just technology

For your body-worn technology to be successfully implemented, you'll need help with the social and cultural concerns around it. We provide an end-to-end service, with all the advice, best practice and consultancy that you'll need.

We'll help engage your people too, making sure they have the right information and training to feel comfortable using the equipment in the field.

We'll help you to set guidelines on how and when cameras should be used, and define the policies and processes that will best protect your officers and the public.

We can help you to understand the metrics that define a successful rollout and put in place the right measures for your organisation.

What you get

- A fully managed service with monthly charges, flexible pricing and reduced upfront equipment costs
- Integration with O₂'s Blue Light Managed Mobility solutions for police services
- A service that can quickly scale to support any number of front-line officers
- Secure and reliable cameras, designed to be hard wearing for daily use
- Encrypted footage, access control and auditing across the whole system to ensure only authorised access, protecting evidence from compromise from capture to prosecution
- Consultancy, advice and best practice guidance around data management and the social and cultural elements of video recording
- Ongoing technical and service support, with access to service improvements like smart video searching and other image analysis tools

We'll support you all the way

It's easy to work with us. Our specialists make sure that you get an end-to-end solution that's right for you. You'll get the whole package, from the best practice and training to make sure your system is embraced and adopted by your teams, to the right equipment and setup for your particular requirements. We'll make sure your people are confident in using the equipment effectively, in a way that supports their vital roles.
