Real-time transparency of operations and compliance

O2 Smart Compliance is a flexible management tool designed to help enterprises rapidly improve their mobile and field-based business processes and operations. The key benefit of the solution is transparency, providing management with clear visibility of field activities, enabling improvements to productivity, allowing immediate and preventive actions to be taken, and recording the time and location that activities take place.

Flexible, powerful and easy-to-use, our mobile solution is empowering organisations in passenger services, business services, retail, leisure and utilities sectors to complete tasks using sensor triggers placed on any asset or thing – with results reported in real time.

The applications are truly endless, but the core benefits are always the same:

- More productivity
- More efficiency
- More safety
- More security
- More compliance

One supplier

We offer a range of rugged devices to suit your needs, or you can simply run O2 Smart Compliance on your own smart devices. Our application works across both cellular and wifi networks – with an intelligent offline mode that uses an encrypted copy of the central database to allow your workers to continue logging and recording tasks in the unlikely event connectivity is lost.

We also provide single-supply management and an end-to-end service wrap covering the sourcing of devices, sensors and application as well as the deployment, evolution and support of your solution. So you don't have to waste time, effort and cost managing multiple suppliers.

Streamline, control and assure

Want visibility of employee adherence to policies – or outsourced workers to contractual obligations? Want to reduce the time and cost spent on paper-based processes? Turn mountains of data into real insight and actions? Or maintain a record to prove compliance?

Built for the cloud, O2 Smart Compliance transforms mobile devices into powerful real-time data collection and business insight tools. Your field force can instantly log, record and submit completed tasks that can be viewed on a dashboard on mobile devices, allowing immediate decisions and corrective or preventive actions to be taken.

As a result, you'll drive dramatic improvements to the efficiency, productivity, safety, security and compliance of all your processes and operations.

What you get with O2 Smart Compliance

- Rugged NFC- and Bluetooth-enabled handsets and tablets with both cellular and wifi connectivity for the harshest environments
- Range of sensors, including NFC tags and Bluetooth beacons, attachable to any asset or location
- Standalone solution with no integration to existing enterprise systems needed
- Rapid deployment and easy scaling on a cloud-based application
- Single-supply management for sourcing, deployment, evolution and support
- Data hosted in UK and in accordance with EC Directives for data protection and privacy
- Real-time processing of data into actionable insights
- Digital, paper-free processes, enabling fast, efficient and accurate reporting and record-keeping
- Best-in-class solution provider: enabling over 1 million physical audits, checks, inspections and tasks to be carried out each month*
- O2's award-winning network, brand and reach

We'll support you all the way
