

m2m Cellular WAN

Secure, enterprise-grade wide-area network connectivity in days not weeks

m2m Cellular WAN provides a true WAN extension that is cost-effective and can be deployed in as little as five days.

More and more organisations are moving their business beyond the traditional four walls of the workplace. It could be an account team setting up a remote office at a client site. A retailer taking card payments in a temporary or mobile shop. Or a construction firm establishing a site office. These new mobile workplaces need a flexible mobile solution capable of providing a true WAN extension.

Quick to set up

This is where m2m Cellular WAN can help. It is a cost-effective way of using the mobile network where fixed lines are too expensive or slow to set up. It uses a plug and play router that works straight out of the box, meaning you can be up and running in as little as five days from ordering.

m2m Cellular WAN is a highly scalable solution. It supports anything from one up to thousands of router locations, and will grow with your business.

Fast, flexible connectivity

With m2m Cellular WAN, pricing is flexible. You pay a monthly subscription and can choose a data package that suits your specific needs.

This could be a large data bundle to provide connection for remote or temporary sites while you're waiting for fixed lines to be installed.

Or you can pay a lower subscription charge and use m2m Cellular WAN as a failover service, as and when it's needed.

Secure and reliable

m2m Cellular WAN is a reliable enterprise-grade connection so you can provide professional services to end-users or maintain secure access to backend systems and file repositories. There are additional security levels in our managed service that allow you to enforce corporate policies or allow filtered internet access.

You can even use it to offer guest network access to clients, without compromising the security of corporate data and traffic.

It is also Payment Card Industry (PCI) compliant, which means you can take payments via credit and debit cards.

Continuity of service

This service is underpinned by our award-winning network – one of the largest in the UK – and backed by our UK-based customer service.

There's continuity of connectivity, even in the rare event that the O₂ signal isn't available, with the solution using the networks of other UK operators.

Why O₂?

We provide you with a low-cost, highly flexible and scalable WAN extension quickly and securely, wherever you are. We offer a fully managed service, from making sure the product meets your needs, to ongoing service management after installation. All to reduce the burden of administration and management for your IT team.

You can try before you buy, with a free 28-day trial option. It's quick and easy to set up – you can be up and running in five days from order.

We'll support you all the way

It's easy to work with us. Our specialists will work with you to understand your requirements and make sure you get the right solution for your needs.

You get one account team supporting you throughout. And you'll get our award winning customer service.
