Seven ways to put the flexibility into your workforce

With remote working and flexible hours becoming the norm, an IT environment designed to let people work securely and collaboratively has fast become essential. So here are our top tips to help your workers get the job done, wherever they are.

Mobile first
Choose smartphones and tablets, to give your employees flexibility and convenience, plus access to the information they need, when they need it

Intelligence, insights and automation
Insights from Artificial Intelligence (AI) and machine learning help workers make better business decisions faster, reducing routine tasks and freeing up capacity for more complex tasks

Cloud adoption
Switching to cloud-based solutions means your people can access services on demand, wherever they are, on any device

Zero-touch activation
Zero-touch activation makes it possible to automate sign-on, so people can log on and get working in no time with a minimum of effort from the user – or anyone else

Zero trust security
Treat every device trying to access your network with suspicion. Build a zero trust security architecture to keep your network safe

Geocollaboration
Embracing collaboration tools, means the right people can get together, without location becoming a barrier

Simplify information
Use tools to filter files based on job role, so people can access the information they need more easily, and get on with work more efficiently
